Oxytocin will be released in response to sepsis, and other form of infections, inflammatory disease and in stress situations. On this basis we conclude that oxytocin is an immunoregulatory hormone and it participates in the acute phase response, it releases growth hormone, and activates the adrenal corticotropic

The Roles of Vasopressin and Oxytocin in
Memory Processing reviews research
progress in a subfield of Behavioral
Pharmacology concerned with
vasopressin's (VP's) and oxytocin (OT's)
roles in memory processing (MP). As
hormones, VP is well-known for its
pressor and antidiuretic action, and OT for
its contribution to parturition and nursing.
