“Uh-oh” embraces “Here we go again” and “Now What?” and “You never can tell what’s going to happen next” and “So much for plan A” and “Hang on, we’re coming to a tunnel” and “No sweat” and “Tomorrow’s another day” and “You can’t unscramble an egg” and “A hundred years from now it won’t make any difference.” “Uh-oh” is more than a momentary reaction to small problems. “Uh-oh” is an attitude—a perspective on the universe. It is a power of an equation that summarizes my view of the conditions of existence: “Uh-huh” + “oh-wow” + “uh-oh” + “oh, God” = “ah-hah!”

Pictorial story starters, arranged in a progressive sequence, give young writers lots of help at first, but then less help as youngsters build skills and become more self-reliant. Initial story starters supply lists of words young writers can incorporate into their narratives; mid-book story starters provide first or last sentences to help youngsters shape their plots' beginnings and endings; and the final few open-ended prompts are pictures only, requiring the full employment of students' imaginations and skills. An introduction provides correlations to the Common Core State Standards. Grades 1-3. Good Year Books. 44 pages. Second Edition.

for the first time in English, two of his most famous works. The first play, *Shores*, takes place on a boat sailing to Israel. Albert is a stow-away fleeing an asylum in Marseille, while David is a trusted crewman about to retire dealing with his girlfriend, the prostitute Alice, and the captain, who doesn't care for him. What will happen at his farewell party? The second play, *Ausitis*, features Dean, a prince who has been robbed of his rightful throne by the commander of the army, Nutro. On the island Dean has been exiled to, a group of young natives want his help in deposing their king... Things get complicated when Livya, the prince's former fiancée, arrives on the island. Discarded by Nutro in turn, she now has no choice but to face the lover she betrayed.

representing hypergeometric functions of several variables. Starting from an integrand which is a product of powers of polynomials, integrals are explained, in an open affine space, as a pair of twisted de Rham cohomology and its dual over the coefficients of local system. It is shown that hypergeometric integrals generally satisfy a holonomic system of linear differential equations with respect to the coefficients of polynomials and also satisfy a holonomic system of linear difference equations with respect to the exponents. These are deduced from Grothendieck-Deligne's rational de Rham cohomology on the one hand, and by multidimensional extension of Birkhoff's classical theory on analytic difference equations on the other.
