modern times as a biofiltration technique used in combination with commercial recirculating aquaculture systems.

~~An Introduction to Aquaponics | PowerHouse Hydroponics~~

Aquaponics is not a new concept. In Asia, it has long been a practice to introduce beneficial fish species to flooded rice paddies to help with insect control as well as to provide fertilizer for the plants in the form of fish waste. When the paddies are drained to allow harvesting, the fish are harvested as well and used as a protein

introduction to aquaponics What is Aquaponics? Aquaponics is a sustainable method of food production combining aquaculture (raising aquatic animals) and hydroponics (cultivating plants in water). In this circulating system, fish waste acts as a natural fertilizer for plants, plants then take up those nutrients and return clean water to the fish.
