Working “ in the shadow of Eduard Norden ” in the author ’ s own words, Nicholas Horsfall has written his own monumental commentary on Aeneid 6. This is Horsfall ’ s fifth large-scale commentary on the Aeneid, and as his earlier commentaries on books 7, 11, 3, and 2, this is not a commentary aimed at undergraduates. Horsfall is a commentators ’ commentator writing with encyclopedic command of Virgilian scholarship for the most demanding reader. It presents analyses of matrices of various filter types based on close approximations, observation, and trial and error. Supplying simple parameters and techniques for creating manufacturable, repeatable products, the second edition provides insights into the cause and elimination of common mode noise in lines and equipment, explores new data on spike, pulse, trapezoid, and quasisquare waves, and reviews the latest high-current filters.

Author Ned Mohan has been a leader in EES education and research for decades. His three-

book series on Power Electronics focuses on three essential topics in the power sequence based on applications relevant to this age of sustainable energy such as wind turbines and hybrid electric vehicles. The three topics include power electronics, power systems and electric machines. Key features in the first Edition build on Mohan's successful MNPHERE texts; his systems approach which puts dry technical detail in the context of applications; and substantial pedagogical support including PPT's, video clips, animations, clicker questions and a lab manual. It follows a top-down systems-level approach to power electronics to highlight interrelationships between these sub-fields. It's intended to cover fundamental and practical design. This book also follows a building-block approach to power electronics that allows an in-depth discussion of several important topics that are usually left. Topics are carefully sequenced to maintain continuity and interest.

Nicholas Horsfall was one of the most recognizable and influential Latinists of his generation. His main legacy is his work on Virgil and the five erudite commentaries on the Aeneid, but he was also a prolific writer of papers, both Virgilian and non-Virgilian. A number of Horsfall's papers, including the important 'Camilla', are translated in this volume for the first time. Stretching from 1971 to 2015, the papers are drawn from his entire output demonstrating his unparalleled ability to connect Roman poetry with history, antiquarianism, and Realien. While showcasing his unique analysis of Virgil, it also highlights Horsfall's work as both a Latinist and a Romanist, illuminating the coherence in his approach. This volume includes many Virgilian papers that have become classics—on Aeneas the colonist, and on the Aeneas-legend, for example. This does not detract from the value of the non-Virgilian papers, many

of which—on the collegium poetarum, and on discussions of reading and libraries at Rome, for example—have become standard treatments of their subjects. Throughout all these works there is an astonishing degree of connection, with glimpses in many papers of his other research interests. 'Nicholas Horsfall needs to be approached through his short papers, typically fresh, innovative and stimulating, and he has been so productive that nobody can claim to have had a full view of his scholarship. When it comes to placing a literary text in the frames offered by material culture, documents, landscapes, history, and by religious, legal, military and antiquarian studies, he was unrivalled.' Professor Alessandro Barchiesi, Professor of Classics, New York University.

We look over each document carefully and replace poor quality images by going back to the original source document. We proof each document to make sure it's all there - including all changes. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner).
