Enhance and expand your students' knowledge and understanding of their AQA breadth study through expert narrative, progressive skills development and bespoke essays from leading historians on key debates. - Builds students' understanding of the events and issues of the period with authoritative, well-researched narrative that covers the specification content - Introduces the key concepts of change, continuity, cause and consequence, encouraging students to make comparisons across time as they advance through the course - Improves students' skills in tackling interpretation questions and essay writing by providing clear guidance and practice activities - Boosts students' interpretative skills and interest in history through extended reading opportunities consisting of specially commissioned essays from practising historians on relevant debates - Cement's understanding of the broad issues underpinning the period with overviews of the key questions, end-of-chapter summaries and diagrams that double up as handy revision aids Democracy, Empire and War: Britain 1851-1964 This title explores political and social reform 1851-1914, the impact of both World Wars, the creation of the Welfare State and the transformational social changes of the 1950s and 1960s. It considers breadth issues of change, continuity, cause and consequence in this period through examining key questions on themes such as democracy, ideology, economy, society, Britain's position in the world and the impact of key individuals.

Explores the universal yearning for love and romance.

This series is designed for all native speakers of Afrikaans. It builds on the practice material of the original series, linking the experience of the pupil with interactive material containing stimulating visual tasks.

The text provides a general introduction and overview of legal history and basic legal concepts, with associated, contextualised legal skills.

The Book of Squares by Fibonacci is a gem in the mathematical literature and one of the most important mathematical treatises written in the Middle Ages. It is a collection of theorems on indeterminate analysis and equations of second degree which yield, among other results, a solution to a problem proposed by Master John of Palermo to Leonardo at the Court of Frederick II. The book was dedicated and presented to the Emperor at Pisa in 1225. Dating back to the 13th century the book exhibits the early and continued fascination of men with our number system and the relationship among numbers with special properties such as prime numbers, squares, and odd numbers. The faithful translation into modern English and the commentary by the translator make this book accessible to professional mathematicians and amateurs who have always been intrigued by the lure of our number system.

In September of 1893, Norwegian zoologist Fridtjof Nansen and a crew manned the schooner Fram, intending to drift, frozen in the Arctic pack-ice, to the North Pole. When it became clear that they would miss the pole, Nansen and his companion Hjalmar Johansen struck off by themselves. Racing the shrinking pack-ice, they attempted, by dog-sled, to go "farthest north." They survived a winter in a moss hut eating walruses and polar bears, and the public assumed they were dead. In the spring of 1896, after three years of trekking, and having made it to within four degrees of the pole, they returned to safety. Nansen's narrative stands with the best writing on polar exploration.

First published in 1983, Understanding Student Learning provides an in-depth analysis of students' learning methods in higher education, at the time. It examines the extent to which these learning methods reflected the teaching, assessment and individual personalities of the students involved. The book contains interviews with students, experiments and statistical analyses of survey data in order to identify successes and difficulties in student learning and the culmination of these techniques is a clearer insight into the process of student learning.
