Advances in Control Instrumentation Systems: Select

The control of processes is one of the main branches of applied instrumentation. Control instrumentation includes devices such as solenoids, valves, circuit breakers, and relays. These devices are able to change a field parameter, and provide remote or automated control capabilities. Transmitters are devices which produce an analog signal, usually in the form of a 4 – 20 ma electrical current signal, although many other options using voltage, frequency, or pressure are possible.
