Are you an architect? Scrum Master? team leader? project manager? If you are any of these, you will find that leadership, done right, is a very tough job. This book deals with the hard parts. Not with tools, but with people. Here is the manifesto that drives this book: For us as team leaders, the goal and the way we measure our work is the overall growth in skills of self-organization and self-maintenance in each member of our team and the team as a whole. To that end: We accept that the team's needs from us change continuously based on their skills for handling the current reality of work, so we embrace a continuously changing leadership style over a one-style-fits-all leadership approach. We believe in challenging ourselves and our teams to always get better, so: * We create slack time for the team to learn and be challenged. * We embrace taking risks for our team over staying safe. * We embrace fear and discomfort while learning new skills over keeping people within their comfort zone. * We embrace experimentation as a constant practice over maintaining the status quo: * With people * With tools * With processes * With the environment * We believe our core practice is leading people, not wielding machines, so: * We embrace spending more time with our team than in meetings. * We embrace treating software problems as people problems. * We learn people skills and communication techniques.

About the notes The second part of this book allows a peek into the minds of some of the best leaders, consultants, and managers as they give advice to a new team leader. Hear from Johanna Rothman, Kevlin Henney, Dan North, Uncle Bob Martin, and many others about the one thing they would like to teach you if you ever become a team leader, Scrum Master, project manager, or architect.

This book directly addresses a long-felt, unsatisfied need of modern color science - an appreciative and technically sound presentation of the principles and main offerings of colorimetry to artists and designers, written by one of them. With his unique blend of training and experience in engineering, with his lifelong interest and, latterly, career in art and art education, Dr. Agoston is unusually well prepared to convey the message of color science to art and design. His book fulfills the hopes I had when I first heard about him and his book. I foresee important and long-lasting impacts of this book, analogous to those of the epoch-making writings by earlier artist-scientists, such as Leonardo, Chevreul, Munsell, and Pope. Nearly all persons who have contributed to color science, recently as well as formerly, were attracted to the study of color by color in art. Use of objective or scientific methods did not result from any cold, detached attitude, but from the inherent difficulties of the problems concerning color and its use, by which they were intrigued. Modern education and experience has taught many people how to tackle difficult problems by use of scientific methods. Therefore - color science.

Introducing a NEW addition to our growing library of computer science titles, Algorithm Design and Applications, by Michael T. Goodrich & Roberto Tamassia! Algorithms is a course required for all computer science majors, with a strong focus on theoretical topics. Students enter the course after gaining hands-on experience with computers, and are expected to learn how algorithms can be applied to a variety of contexts. This new book integrates application with theory. Goodrich & Tamassia believe that the best way to teach algorithmic topics is to present them in a context that is motivated from applications to uses in society, computer games, computing industry, science, engineering, and the internet. The text teaches students about designing and using algorithms, illustrating connections between topics being taught and their potential applications, increasing engagement.
