International development stakeholders harness communication with two broad purposes: to do good, via communication for development and media assistance, and to communicate do-gooding, via public relations and information. This book unpacks various ways in which different efforts to do good are combined with attempts to look good, be it in the eyes of donor constituencies at large, or among more specific audiences, such as journalists or intra-agency decision-makers. Development communication studies have tended to focus primarily on interventions aimed at doing good among recipients, at the expense of examining the extent to which promotion and reputation management are elements of those practices. This book establishes the importance of interrogating the tensions generated by overlapping uses of communication to do good and to look good within international development cooperation. The book is a critical text for students and scholars in the areas of development communication and international development and will also appeal to practitioners working in international aid who are directly affected by the challenges of communicating for and about development.

Learning is the foundation of the human experience. It begins at birth and never stops, a continuous and malleable link across life stages of human development. Disparities in learning access and outcomes around the world have deep consequences for income, social mobility, health, and well-being. For international development practitioners faced with today's unprecedented environmental and geopolitical pressures, learning should be viewed as a touchstone and target for those seeking to truly effect global change. This book traces the path of international development work—from its pre-colonial origins to the emergence of economics as the dominant discipline in the field—and lays out a new agenda for policymakers, researchers, and practitioners, from early education through adulthood. Learning as Development is an attempt to rethink international education in a changing world.

What are Canada's various links with international development and globalization? They extend beyond foreign aid to diplomacy, trade, finance, aid, immigration, military intervention (both peacekeeping and combat roles), membership in a variety of international organizations, relations with indigenous peoples, and people-to-people links. This multi-disciplinary and multi-author textbook, designed for first- or second-year students, introduces the main concepts, theories, and perspectives that have shaped Canada's interactions with developing countries in a globalizing world. It starts by considering Canada as a case study in international development and globalization. It examines Canada's diplomatic, economic, military, social, immigration and aid policies, how they have changed over time and how they have interacted with each other and with Canada's treatment of Indigenous peoples. The book presents economic, political, and cultural dimensions of the process of globalization and the ways they affect Canada; examines the public institutions, private sector and civil society organizations in Canada; and explores the moral imperatives behind Canadian international policy. Finally, it examines current issues, including Canada's promotion of human rights, democracy, good governance, support to the private sector, and relations with fragile and conflict-affected states and the emerging economies. Law and Practice of the United Nations: Documents and Commentary combines primary materials with expert commentary demonstrating the interaction between law and practice in the UN organization, as well as the possibilities and limitations of multilateral institutions in general. Each chapter begins with a short introductory essay describing how the documents that ensue illustrate a set of legal, institutional, and political issues relevant to the practice of diplomacy and the development of public international law through the United Nations. Each chapter also includes questions to guide discussion of the primary materials, and a brief bibliography to facilitate further research on the subject. This second edition addresses the most challenging issues confronting the United Nations and the global community today, from terrorism to climate change, from poverty to nuclear proliferation. New features include hypothetical fact scenarios to test the understanding of concepts in each chapter. This edition contains expanded author commentary, while maintaining the focus on primary materials. Such materials enable a realistic presentation of the work of international diplomacy: the negotiation, interpretation and application of such texts are an important part of what actually takes place at the United Nations and other international organizations. This work is ideal for courses on the United Nations or International Organizations, taught in both law and international relations programs.

This book addresses a conundrum for the international development community: The law of development cooperation poses major constraints on delivering aid where it is needed most. The existence of a state with an effective government is a basic condition for the transfer of aid, making development cooperation with 'fragile' nations particularly challenging. The author explores how international organizations like the World Bank have responded by adopting formal and informal rules to engage specifically with countries with weak or no governments. Von Engelhardt provides a critical analysis of the discourse on fragile states and how it has shaped the policy decision-making of international organizations. By demonstrating how perceptions of fragility can have significant consequences both in practice and in law, the work challenges conventional research that dismisses state fragility as a phenomenon beyond law. It also argues that the legal parameters for effective global policy play a crucial role, and offers a fresh approach to a topic that is central to international security and development.
