BSAVA Manual of Canine and Feline Radiography and Radiology. Confident radiographic interpretation presents a considerable challenge and this manual provides a comprehensive review of the approach to radiological interpretation, the range of variants and the key fundamental principles and their application to common diseases.

BSAVA Manual of Canine and Feline Radiography and ...

The Manual of Canine and Feline Cardiology was an eminently readable overview of the field of veterinary cardiology. However, it left me wanting a more in-depth coverage of disease types and etiologies, and for this I had to go to an older, but even more thorough text by Kittleson and Kienle, Small Animal Cardiovascular Medicine.

The most effective, practical approach to the recognition and management of cardiovascular and cardiopulmonary medicine, MANUAL OF CANINE AND FELINE CARDIOLOGY, 4th Edition takes a user-friendly approach to the challenges and conditions you encounter in everyday practice. This completely revised and updated edition includes vital information on diagnostic modalities and techniques, therapeutic options, surgical procedures, and pharmaceutical management of the dog and cat cardiac patient. This invaluable, practical reference covers the full breadth of canine and feline cardiology diagnosis and management in a straightforward and clinically focused format. Covers common cardiovascular disorders and practical treatment methods for cardiac failure, cardiac arrhythmias, conduction disturbances, cardiopulmonary arrest, as well as procedures for resuscitation. Includes numerous reproductions of electrocardiograms, thoracic radiographs, and pressure curves Vibrant, full-color format helps important material stand out and includes vivid illustrations to aid in diagnosis and treatment. A user-friendly format with bullet points, tables, key points, and boxes offers at-a-glance access to key information. Cardiac Surgery chapter provides illustrated, step-by-step coverage of cardiovascular surgical procedures and techniques. Chapters on Pacemaker Therapy and Cor Pulmonale and Pulmonary Thromboembolism expand the scope of coverage A completely updated drug formulary presents the most current therapies used to pharmacologically manage cardiovascular disease. Twenty-nine expert contributors share their knowledge and clinical exposure to ensure you are using the most trustworthy and up-to-date information available.

The manual has been written with the veterinary surgeon in general practice in mind and it aims to offer both sound scientific information and practical easy-to-follow advice. Following a consideration of the role of behavioural medicine within the veterinary practice, the normal behaviours of cats and dogs are described. Some more theoretical chapters are included, to give a background understanding of learning theory, the physiology of fear, and types of aggression. But the major focus of the Manual is on the practical approach to history taking, diagnosis, treatment and prognosis, and follow-up of the range of behavioural problems encountered in dogs and cats. Colour photographs and specially commissioned drawings illustrate important features such as body postures, and tables throughout help the reader to access important information quickly.

This best selling manual has been fully revised and updated with the latest information. New chapters include neurological genetic disease testing and counselling; adjunctive therapies; and nutrition. This edition will also feature a DVD-ROM with video clips. This new edition of one of the BSAVA’s most popular Manuals has been extensively revised, drawing on the expertise of a predominantly new roster of authors. The Manual focuses on commonophthalmic conditions in dogs and cats, structured into examination and clinical techniques; diagnosis and treatment of common ocular diseases, and a problem-oriented approach to common clinical presentations. The Manual provides an accessible source of practical information for general practitioners, veterinary students, nurses and technicians, and will also be a useful resource for those working toward specialist qualifications. Under the guidance of the new editorial team, this new edition has been completely revised and updated. The book has been refocused solely to cats and dogs and reorganized, while retaining the practical approach. The first section covers anatomy and physiology of the oral cavity, diagnostic techniques, anaesthesia and analgesia, and dental instrumentation and equipment. There is also a separate chapter dedicated to operator health and safety considerations. The remainder of the manual focuses on conditions encountered in small animal practice, including developmental abnormalities, fractures and attrition. Inflammatory and infectious disease - stomatitis and periodontitis - are discussed in detail for both cats and dogs. A chapter on surgery details extraction procedures. The manual is illustrated throughout with full-colour photographs as well as retaining the clear procedural diagrams drawn by editor David Crossley.

Dermatology constitutes a large percentage of the daily caseload in small animal practice and can represent a challenge for the busy practitioner, as many different diseases have similar presenting signs. For this reason, a structured understanding of how to approach a dermatological case is essential for a successful outcome. The 4th edition of the BSAVA Manual of Canine and Feline Dermatology has been completely updated, chapters have been expanded and structurally divided to include the management of specific diseases and common dermatological cases, such as ectoparasite infestation and its treatment and prophylaxis, atopic dermatitis and its management, superficial and deep pyoderma and their treatment, feline-specific conditions and their management, autoimmune and immune-mediated diseases and a targeted management, etc. New chapters have also been added to this new edition, such topical treatments, nutrients of the skin and regional dermatoses. The manual begins by providing the reader with a grounding in examination and investigative techniques, including a new chapter on cytology. The second section focuses on a problem-oriented approach to common dermatological conditions and their management. The final part of the manual covers the major skin diseases of dogs and cats.

This edition covers the latest techniques for diagnosing heart disease and respiratory conditions in the dog and cat, common cardiovascular disorders and practical treatment methods for cardiac failure, cardiac arrhythmias, conduction disturbances, cardiopulmonary arrest and resuscitation. Since publication of the third edition in 2004 there have been important advances. Several endocrine disorders, such as feline acromegaly and hyperaldosteronism, have risen in importance. The use of diet and novel insulins in diabetic cats, and new drugs such as trilostane and methimazole, which were briefly mentioned in previous editions are now considered routine. In addition, the genetic risks associated with many disorders have been elucidated. • A new chapter presents the principles of interpreting endocrine test results and discusses how test performance is assessed in relation to diagnostic confidence. • The central section on glands and their diseases is presented in a standard format – detailing physiology, aetiology, clinical features, diagnosis and treatment - to aid information retrieval. • The final section has been rewritten to focus on solving clinical and clinicopathological abnormalities with an endocrine dimension.
