that a research design is a procedural plan that is adopted by researchers to answer questions

objectively, accurately, economically and with validity. A traditional research design is a

blueprint or detailed plan of how a research study is to be

completed; operating variables for

INTRODUCTION

The research design sets
the parameters of your
project: it determines

exactly what will and
will not be included. It
also defines the criteria

by which you will

and draw your conclusions. The reliability and validity of your study depends on how you collect, measure, analyze, and interpret your data.

Measurement is the process of observing and recording the

observations that are collected as part of a research effort. There are two major issues that will be considered here. First, you have to understand the fundamental ideas involved in measuring.

Here we consider two of major measurement concepts.
