Skeletal muscle is attached to the skeleton and is striated and voluntary. 2. Belly is fleshy middle of muscle, origin is the point of attachment to the skeleton at the less-moveable end (usually proximal) and insertion is the point of attachment to the skeleton and the more-moveable end (usually distal).

The vertebrate skeleton General characteristics. In vertebrates the adult skeleton is usually formed of bone or cartilage—living substances that grow with the animal, in contrast to the many types of invertebrate skeleton that do not grow or are dead secretions, deposits, or crystals. The internal position of bones and their central position in limbs provide firm support for small and large animals.
