"Fundamentals of Transportation Engineering: A Multimodal Systems Approach" is intended for the first course in Transportation Engineering. Combining topics that are essential in an introductory course with information that is of interest to those who want to know why certain things in transportation are the way they re, the text places a strong emphasis on the relationship between the phases of a transportation project. The text familiarizes students with the standard terminology and resources involved in transportation engineering, provides realistic scenarios for students to analyze, and offers numerous examples designed to develop problem-solving skills. Features: Non-automobile modes addressed extensively: Public transit, air transportation, and freight modes. Purposeful, but flexible sequence of topics. Ongoing case study of a single region called "Mythaca," which shows students the interconnections between many transportation issues. Chapter opening scenarios: Each chapter begins with a scenario designed to orient students to a transportation problem that might confront a transportation engineer. Scenarios, examples, and homework problems based on the extensive experience of the authors. Traditional, standard transportation engineering combined with the needs of future transportation engineering. Special Discussion Boxes: "Think About It" boxes provide students with highlighted topics and concepts to reinforce material.

The definitive transportation engineering resource—fully revised and updated The two-volume Handbook of Transportation Engineering, Second Edition offers practical, comprehensive coverage of the entire transportation engineering field. Featuring 18 new chapters and contributions from nearly 70 leading experts, this authoritative work discusses all types of transportation systems—freight, passenger, air, rail, road, marine, and pipeline—and provides problem-solving engineering, planning, and design tools and techniques with examples of successful applications. Volume II focuses on applications in automobile and non-automobile transportation, and on safety and environmental issues. VOLUME II COVERS: Traffic engineering analysis Traffic origin-destination estimation Traffic congestion Highway capacity Traffic control systems: freeway management and communications Traffic signals Highway sign visibility Transportation lighting Geometric design of streets and highways Intersection and interchange design Pavement engineering: flexible and rigid pavements Pavement testing and evaluation Bridge engineering Tunnel engineering Pedestrians Bicycle transportation Spectrum of automated guideway transit (AGT) and its applications Railway vehicle engineering Railway track design Improvement of railroad yard operations Modern aircraft design techniques Airport design Air traffic control systems design Ship design Pipeline engineering Traffic safety Transportation hazards Hazardous materials transportation Incident management Network security and survivability Optimization of emergency evacuation plans Transportation noise issues Air quality issues in transportation Transportation and climate change
