To set up a single LinkProof device with external SOA 1. Set up static NAT addresses for the Web server using the following LinkProof panes: • LinkProof > Global Configuration > Enable Smart Nat • LinkProof > SmartNAT > Static NAT > Insert rows Because LinkProof handles the public addresses in this example, use the following static NAT settings:

LinkProof Quick Start Guide - Radware

Radware's LinkProof is designed to provide load balancing and fault tolerance for multiple network connections. Because it is an extension of the FireProof, the LinkProof can also load balance both transparent and non-transparent firewalls as well; however, it is optimized to work with multiple links.

For increasing the reliability and security of your network, Radware LinkProof is the right choice. Radware LinkProof avoids unnecessary additional bandwidth costs by allowing multiple branches to have consistent and reliable network performance. The server-less branch architecture provides the availability and security needed for a cost-effective and agile WAN. Learn more about how LinkProof uses the innovative On-Demand Switch platform to optimize your network.

LinkProof - Link Load Balancing Solution - radware.com

Access control lists (ACLs) enable you to restrict network use by certain users or devices. The new Stateful ACL module available with LinkProof 6.20 not only allows you to restrict access by certain clients or to certain servers, it can also distinguish legitimate packets for different types of connections and allow only packets matching a known connection state; others will be rejected.

LinkProof Stateful ACL module - Radware

LinkProof NG link load balancer is a next-generation multi-homing and enterprise gateway solution that guarantees service level availability and continuous connectivity of enterprise and cloud-based applications.

Radware Cloud DDoS Protection Services User Guide

Radware performs internal hardware changes from time to time. Recent thermal mapping implemented on Radware platforms indicates that some of the internal fans are redundant. That is, that not all the fans are required to maintain correct component temperature. These redundant fans were removed in new hardware revisions.
