Dewey's work is, on the one hand, directed against traditional epistemological positions, of idealist and realist origins alike. Dewey focusses on a critique of their common foundations, viz the split between object and subject, reality and knowledge, world and consciousness. His work lays, on the other hand, the foundations of a constructivist epistemological program, which starts from the relation of knowledge to action.

own continued action. While the living thing may easily be crushed by superior force, it none the less tries to turn the energies which act upon it into means of its own further existence. If it cannot do so, it does not just split into smaller pieces (at least in the higher forms of life), but loses its identity as a living thing. As long as it endures, it struggles to use surrounding energies in its own behalf. It uses light, air, moisture, and the material of soil. To say that it uses them is to say that it turns them into means of its own conservation. As long as it

is growing, the energy it expends in thus turning the environment to account is more than compensated for by the return it gets: it grows. Understanding the word "control" in this sense, it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up. Life is a self-renewing process through action upon the environment.

provide an introduction to Dewey's educational theories that is founded on a broad and comprehensive reading of his philosophy as a whole. They discuss Dewey's path-breaking contributions by focusing on three important paradigm shifts – namely, the cultural, constructive, and communicative turns in twentieth-century educational thinking. Secondly, the authors recontextualize Dewey for a new generation who has come of age in a very different world than that in which Dewey lived and wrote by connecting his philosophy with six recent and influential discourses

(Bauman, Foucault, Bourdieu, Derrida, Levinas, Rorty). These serve as models for other recontextualizations that readers might wish to carry out for themselves.

Our schools are troubled with a multiplication of studies, each in turn having its own multiplication of materials and principles. Our teachers find their tasks made heavier in that they have come to deal with pupils individually and not merely in mass. Unless these steps in advance are to end in distraction, some clew of unity, some principle that makes for simplification, must be found. This book

represents the conviction that the needed steadying and centralizing factor is found in adopting as the end of endeavor that attitude of mind, that habit of thought, which we call scientific. This scientific attitude of mind might, conceivably, be quite irrelevant to teaching children and youth. But this book also represents the conviction that such is not the case; that the native and unspoiled attitude of childhood, marked by ardent curiosity, fertile imagination, and love of experimental inquiry, is near, very near, to the attitude of the scientific mind. If these pages assist

decades after *Democracy and Education* (Dewey's most comprehensive statement of his position in educational philosophy), this book demonstrates how Dewey reformulated his ideas as a result of his intervening experience with the progressive schools and in the light of the criticisms his theories had received. Analyzing both "traditional" and "progressive" education, Dr. Dewey here insists that neither the old nor the new education is adequate and that each is miseducative because neither of them applies the principles of a carefully developed philosophy of experience.

Many pages of this volume illustrate Dr. Dewey's ideas for a philosophy of experience and its relation to education. He particularly urges that all teachers and educators looking for a new movement in education should think in terms of the deeped and larger issues of education rather than in terms of some divisive "ism" about education, even such an "ism" as "progressivism." His philosophy, here expressed in its most essential, most readable form, predicates an American educational system that respects all sources of experience, on that offers a

Dworkin has gathered some of Dewey's clearest and most characteristic statements on education and set them in the stream of American social and intellectual history. In addition, he has indicated some of the rich literature available to those who would probe more deeply into Dewey's ideas and the context in which they matured.

philosophy of nature; and his educational theory, which has often been misunderstood. In addition, Dewey's pragmatism and pragmatist ethics are discussed, as are some of the criticisms that can be directed at them. Throughout the book, Dewey's ideas are related to the general history of ideas, but there is also a constant focus on how Dewey may assist us in solving some of the problems that face us in a so-called postmodern era. This book is the first to offer an interpretation of John Dewey's works with particular emphasis on his contribution to psychology.

John Dewey distinguished himself by combining a culturalist approach to human life with a naturalistic one. He was an avowed naturalist and follower of Darwin, and Brinkmann shows how his non-reductionist, naturalist psychology can serve as a much-needed correction to contemporary forms of "evolutionary psychology." Dewey's psychology, however, is not an isolated element in his thinking as a whole, so the author also provides an introduction to the philosophical, ethical, and educational ideas that go hand-in-hand with his psychology. In the past

chapter begins with theory and ends with practical implications. While there are numerous books on Dewey, there are relatively few that connect his philosophy of education to actual practice. By linking primary fields of philosophy with classroom teaching and education policy, Boyles suggests that the binary between theory and practice is a false chasm that can and should be bridged if teaching and learning are to change into more dynamic, reflexive, and authentic interactions.
