At June's Nicer Tuesdays Online we dived into original ways of storytelling with photographer David Uzochukwu and artist Nigel Poor.

This is an original sociological study of breast cancer patients' participation in Internet spaces. While much has been debated about the significance of the Internet, the actual processes of communication in which people engage online are little understood as yet. Exploring the ways in which participants in online spaces configure their experience into a story, the book presents readers with an innovative way of understanding online communication as a socially significant activity. The substantive focus of storytelling online is analyzed sensitively and thoroughly in its specificity as a social phenomenon. At the same time it is connected to a broad range of debates on communication and Internet, health, illness, and social agency.

Historically, social researchers have shown a willingness to exploit new technologies to enhance, facilitate and support their various activities. However, arguably no other technological development has influenced the landscape of social research as rapidly and fundamentally as the Internet. This collection avoids both uncritical embrace and wholesale dismissal by considering some of the key literature in the field of Internet research methods. Volume One: Core Issues, Debates and Controversies in Internet Research introduces themes and issues that run across all four volumes such as: epistemology, ontology and methodology in the online world; access, social divisions and the 'digital divide'; and the ethics of online research. Volume Two: Taking Research Online - Internet Survey and Sampling addresses the range of resources, digital archives and Internet-based data sources that exist online from relatively straightforward and practical guides to such material through to more polemical pieces which consider problems relating to the use, access and analysis of online data and resources. Volume Three: Taking Research Online - Qualitative Approaches considers the broad range of approaches to conducting researching via or 'in' the Internet. The focus is on conventional methods that have been 'taken online', and which in doing so, have become transformed in scope and character. Volume Four: Research 'On' and 'In' the Internet - Investigating the Online World follows logically from that which precedes it in exploring how social research has been 'taken online', not simply through the deployment of existing methods and techniques via the Internet, but in researchers' increasing recognition and investigation of the online world as a sphere of human interaction - a socio-cultural arena to be explored 'from the desktop' as it were.

The production and consumption of Information and Communication Technologies (or ICTs) have become embedded within our societies. This handbook is about the many challenges presented by ICTs. It sets out an intellectual agenda that examines the implications of ICTs for individuals, organisations, democracy, and the economy

It may take a village to raise a child, but increasingly that means a virtual village. While the media may focus on the so-called "mommy wars," and babyrazzi follow every move of celebrity moms, millions of mothers world-wide are creating online communities. These mommy groups provide an alternative context for understanding how women construct modern motherhood together. Motherhood Online explores the multifaceted lives that moms live online. Ranging from longitudinal studies to focused explorations of identity, and the newest community context, mommy blogs, this book documents the millions of mommies who have found an outlet online. Whether centered on region, religion, race, or something else altogether, these communities of mothers are creating a new space for mom and allowing many women to maintain a grasp, however tenuous, on sanity in this crazy-making world of modern motherhood.

This book examines cultural participation from three different, but interrelated perspectives: participatory art and aesthetics; participatory digital media, and participatory cultural policies and institutions. Focusing on how ideals and practices relating to cultural participation express and (re)produce different "cultures of participation", an interdisciplinary team of authors demonstrate how the areas of arts, digital media, and cultural policy and institutions are shaped by different but interrelated contextual backgrounds. Chapters offer a variety of perspectives and strategies for empirically identifying "cultures of participation" and their current transformations and tensions in various regional and national settings. This book will be of interest to academics and cultural leaders in the areas of museum studies, media and communications, arts, arts education, cultural studies, curatorial studies and digital studies. It will also be relevant for cultural workers, artists and policy makers interested in the participatory agenda in art, digital media and cultural institutions.

Using some of the latest qualitative research tools, this volume highlights insights about consumption ranging from how consumers process advertising messages, to how small retailers can combat the practice of "showrooming" by consumers comparing online prices with mobile devices.

Qualitative Research in Nursing and Healthcare is an invaluable resource for those who carry out qualitative research in the healthcare arena. It is intended to assist: Professionals and academics in the healthcare field who undertake or teach research in clinical or educational settings; Postgraduates who are undertaking qualitative research and want to revise qualitative research approaches and procedures before going on to more specialist texts; and Undergraduates in their last year who wish to learn about qualitative perspectives or carry out a project using these approaches. Fully updated from the earlier editions by Holloway and Wheeler, it reflects recent developments in nursing research. This new edition provides clear explanations of abstract ideas in qualitative research as well as practical procedures. Structured into four sections, the book looks at the initial stages, methods of data collection, qualitative approaches and analysis of collected data. It also contains a chapter on writing up and publishing qualitative research. With applied and practical examples throughout, Qualitative Research in Nursing and Healthcare is essential reading for those who are looking for a comprehensive introduction to qualitative research.

What is absence? What is presence? How are these two phenomena related? Is absence merely not being present? This book examines these and other questions relating to the role of absence and presence in everyday politics. Absence and presence are used as political tools in global events and everyday life to reinforce ideas about space, society, and belonging. Between Absence and Presence contains six empirically-focused chapters introducing case study locations and contexts from around the world. These studies examine how particular groups' relationships with places and spaces are characterized by experiences that are neither wholly present nor wholly absent. Each author demonstrates the variety of ways in which absence and presence are experienced - through silence, forgetting, concealment, distance, and the virtual - and constituted - through visual, aural, and technological. Such accounts also raise philosophical questions about representation and belonging: what must remain absent, and what is allowed to be present? Who decides, and how? Whose voices are heard? Recognizing the complexity of these questions, Between Absence and Presence provides a significant contribution in reconciling theorizations of absence with everyday life. This book was published as a special issue of Space and Polity.

This collection of dialogues is the only textbook of its kind. Internet Inquiry: Conversations About Method takes students into the minds of top internet researchers as they discuss how they have worked through critical challenges as they research online social environments. Editors Annette N. Markham and Nancy K. Baym illustrate that good research choices are not random but are deliberate, studied, and internally consistent. Rather than providing single "how to" answers, this book presents distinctive and divergent viewpoints on how to think about and conduct qualitative internet studies.

The Handbook of Internet Studies brings together scholars from a variety of fields to explore the profound shift that has occurred in how we communicate and experience our world as we have moved from the industrial era into the age of digital media. Presents a wide range of original essays by established scholars in everything from online ethics to ways in which indigenous peoples now use the Internet Looks at the role of the internet in modern societies, and the continuing development of internet studies as an academic field Explores Internet studies through history, society, culture, and the future of online media Provides introductory frameworks to ground and orientate the student, while also providing more experienced scholars with a convenient and comprehensive overview of the latest trends and critical directions in the many areas of Internet research
