In The Bone Lady, Manhein artfully shares such secrets in a series of brief sketches. At her best, she recalls the engrossing details of a specific case, explains how its riddles were (or could not be) answered, and concludes with the human reverberations: a mother comforted by closure in a runaway daughter's death, a vicious murderer brought to justice days before he can kill a witness.

Over the past thirty years, forensic anthropologist Mary H. Manhein has helped authorities to identify hundreds of deceased persons throughout Louisiana and beyond. In Bone Remains, she offers details of twenty riveting cases from her files -- many of them involving facial reconstructions where only bones offered clues to an individual's story. Manhein takes readers into the field, inside her lab, and through DNA databases and government bureaucracies as she and her team tirelessly work to identify and seek justice for those who can no longer speak for themselves. From a two-thousand-year-old mummy, to Civil War sailors, to graves disturbed by Hurricane Isaac, Manhein presents both modern and historic cases. Her conversational accounts provide a fascinating look into the stories behind the headlines as well as sometimes heart-wrenching details of people lost and found. Manhein shows how each case came to her team, how they used scientific analysis to unravel the secrets the bones had to tell, and how facial reconstructions and a special database for missing and unidentified people assisted in closing cold cases long believed to be unsolvable. She also discusses several mysteries that still elude her, further reflecting the determination and passion central to Manhein's career for over three decades.

Drawing on cases he worked for the New Mexico Office of the Medical Investigator, Rhine demonstrates how unidentified skeletal remains indicate race, sex, age, height, and ultimately identity and how the specialist decodes skeletal anomalies to establish cause of death.

Published ten years after the genocide in Rwanda, The Bone Woman is a riveting, deeply personal account by a forensic anthropologist sent on seven missions by the UN War Crimes Tribunal. To prosecute charges of genocide and crimes against humanity, the UN needs proof that the bodies found are those of non-combatants. This means answering two questions: who the victims were, and how they were killed. The only people who can answer both these questions are forensic anthropologists. Before being sent to Rwanda in 1996, Clea Koff was a twenty-three-year-old graduate student studying prehistoric skeletons in the safe confines of Berkeley, California. Over the next four years, her gruelling investigation into events that shocked the world transformed her from a wide-eyed student into a soul-weary veteran — and a wise and deeply thoughtful woman. Her unflinching account of those years — what she saw, how it affected her, who went to trial based on evidence she collected — makes for an unforgettable read, alternately riveting, frightening and miraculously hopeful. Readers join Koff as she comes face to face with the human meaning of genocide: exhuming almost five hundred bodies from a single grave in Kibuye, Rwanda; uncovering the wire-bound wrists of Srebrenica massacre victims in Bosnia; disinterring the body of a young man in southwestern Kosovo as his grandfather looks on in silence. As she recounts the fascinating details of her work, the hellish working conditions, the bureaucracy of the UN, and the heartbreak of survivors, Koff imbues her story with an immense sense of hope, humanity and justice.

In a nation on the brink of war, a young art student's star-crossed love begins to bloom in the first book of the New York Times bestselling epic fantasy trilogy by award-winning author Laini Taylor. Around the world, black handprints are appearing on doorways, scorched there by winged strangers who have crept through a slit in the sky. In a dark and dusty shop, a devil's supply of human teeth grown dangerously low. And in the tangled lanes of Prague, a young art student is about to be caught up in a brutal otherworldly war. Meet Karou. She fills her sketchbooks with monsters that may or may not be real; she's prone to disappearing on mysterious "errands"; she speaks many languages -- not all of them human; and her bright blue hair actually grows out of her head that color. Who is she? That is the question that haunts her, and she's about to find out. When one of the strangers -- beautiful, haunted Akiva -- fixes his fire-colored eyes on her in an alley in Marrakesh, the result is blood and starlight, secrets unveiled, and a star-crossed love whose roots drink deep of a violent past. But will Karou live to regret learning the truth about herself?

This manual is the culmination of more than 35 years of skeletal analysis, teaching forensic anthropology and conducting skeletal research at universities and museums in the U.S., Asia, Pacific, Africa, and Europe. While there are many illustrated human osteology and anatomy books available to students and professionals, there is none that approaches the topic of identifying and siding human bones quite like The Bone Book, with its large, annotated color photographs and easy-to-follow steps. Designed for use in either the lab or the field, the book covers the material from top to bottom—from cranium to metatarsals and phalanges—with the help of more than 400 vivid, full-color photographs, clearly annotated to highlight key features. Complex bones, such as the cranium, are shown in multiple photos (including several " exploded " or disarticulated skulls, showing how the complex bones fit together). In addition to the photos, the book offers easy-to-follow instructions and mnemonic tips that guide the reader, step by step, through the process of identifying every individual bone and which side of the body it came from. The Bone Book can be used as a stand-alone reference or as a companion to other sources. Although most of the photos show adult bones, the book also includes helpful photos of subadult bones and even fetal bones, which some forensic cases involve. The Bone Book will contribute to filling a gap in identifying and siding bones more easily and, in that sense, add to the body of anthropological, anatomical, and medical literature. It will be useful to anthropology students, anatomists, surgeons, medical examiners, and others working with the human skeleton.
