This book deals with the creation of local innovation systems (LIS) in emerging countries. The authors analyze the role of the government, firms and research centers in the formation of LIS. Special attention is paid to the manner in which different leading actors implement their LIS development strategies. The book presents detailed case studies on different strategies used to implement LIS in Singapore, Dubai, Taiwan and Iran.

Investigating the innovation activities of multinational corporations, this book uncovers and examines why the geography of innovation by multinationals is overwhelmingly local, in spite of their global operations in manufacturing and sales through case studies of produce

development by three global players: Toyota, Sony, and Canon. The microdynamic approach of the book allows an in-depth investigation of the engineering and technical aspects of innovation making. The book unfolds the complex and constant process of trial and error in innovation and reveals three fundamental natures of innovation making: complexity, interdisciplinarity, and prototyping and testing. In order to manage these three natures of innovation, firms have to plan, ironically, for unplanned situations and to collocate knowledge, people, and resources.

Regions and cities are the natural loci where knowledge is created, and where it can be easily turned into a commercial product. Regions are territories where, under certain socio-economic conditions, a strong sense of belonging and mutual trust develops the ability to transform information and inventions into innovation and productivity increases, through cooperative or market interaction. Especially in contexts characterised by a plurality of agents – such as cities or industrial districts – knowledge is the result of cooperative learning processes, nourished by spatial proximity, network relations, interaction, creativity and recombination capability. This book explains the logic behind these interactions and cooperative attitudes in regions and cities. One of the most significant channels comes from the presence of a university and its collaboration with firms and scientific research centres. These mutual relations between academic institutions and enterprises are of key importance. The significance of universities in driving economic well being and regional development has been well documented for some time now. Much of the research, however, has centred upon countries in Western Europe and the United States. Increasingly, and since the expansion of the European Union in 2004 in

particular themes of academic entrepreneurship, university-business links, knowledge and innovation have become important on a Europe-wide scale. This book draws together key thinkers from across the continent to analyze the importance of higher educational institutions in fostering development.

This book represents a significant contribution to the debates surrounding globalization and local systems of innovation. The diverse perspectives on global and local processes combined with original insights on developing countries should be of value to scholars and students of economics, social science, political science and business administration. The book should also be of interest to policymakers in governmental and non-governmental bodies, particularly international development agencies.

Montreal has huge potential to become one of the most dynamic cities across OECD countries, thanks to its talented and creative population. Yet the city has not demonstrated outstanding results in terms of job creation and collective wealth generation in the past few years. This report examines ...

This unique Companion provides a comprehensive overview and critical evaluation of existing conceptualizations and new developments in innovation research. It draws on multiple perspectives of innovation, knowledge and creativity from economics, geography, history, management, political science and sociology. The Companion brings together leading scholars to reflect upon innovation as a concept (Part I), innovation and institutions (Part II), innovation

and creativity (Part III), innovation, networking and communities (Part IV), innovation in permanent spatial settings (Part V), innovation in temporary, virtual and open settings (Part VI), innovation, entrepreneurship and market making (Part VII), and the governance and management of innovation (Part VIII).

Explores the key elements and issues of knowledge management in both a conceptual and an applied manner.

This volume provides a collection of theoretical articles and empirical studies on innovation and location by focusing on the institutions and systems that mediate knowledge spillovers. The objective is to provide an international comparison using a variety of approaches. The volume is organized around the three themes. The first focuses on theoretical work that attempts to advance our understanding of knowledge externalities and systems on innovation. The second section provides empirical studies that attempt to measure these impacts. The final section considers future challenges to regional economic development policy in the face of economic integration and globalization.

This open access book summarizes research being pursued within the SISCODE (Society in Innovation and Science through CO-DEsign) project, funded by the EU under the H2020 programme, the goal of which is to set up an analytical, reflective and learning framework to explore the transformations in initiatives and policies emerging from the interaction between citizens and stakeholders. The book provides a critical analysis of the co-design processes

activated in 10 co-creation labs addressing societal challenges across Europe. Each lab as a case study of real-life experimentation is described through its journey, starting from the purpose on the ground of the experimentation and the challenge addressed. Specific attention is then drawn on the role of policies and policy maker engagement. Finally, the experimentation is enquired in terms of its output, transformations triggered within the organization and the overall ecosystem, and its outcomes, opening the reasoning towards the lessons learnt and reflections that the entire co-creation journey brought.

This book looks at the importance and potential of cluster initiatives in Central and Eastern Europe. Existing clusters are mapped, recent policy advances are described and conclusions are drawn on the potential of business clusters to foster economic growth.
