The Phenomenon of Man | Teilhard de Chardin | Summary ...
Sixty years ago this year, Pierre Teilhard de Chardin's ground-breaking book The Phenomenon of Man was published in English for the first time. By the time I picked it up nearly ten years ago, its popularity had already waned as its many critics had become overwhelming. Yet, I still remember being completely and utterly captivated by the brilliance of what Teilhard tried to do in that book ...

The Phenomenon of Man - Pierre Teilhard de Chardin ...
Pierre Teilhard De Chardin in The Phenomenon of Man develops a view of evolution as an enduring and comprehensive process, a three-fold synthesis of the material, physical and the world of the mind and spirit (consciousness; this somewhat reminds me of the development of consciousness via Hegel's Phenomenology of Spirit). It is a fascinating read in terms of thinking about the leap(s) and ...

The Phenomenon of Man Summary - eNotes.com

The Phenomenon of Man. New York: Harper & Brothers, 1959. Early printing. Octavo, original blue cloth, uncut, original dust jacket. Clean cloth boards, unclipped and unfaded dust jacket with closed tears to top edge and upper flap of front panel, very faint stain to center of back panel, very slight speckling to spine of bright.

Visionary theologian and evolutionary theorist Pierre Teilhard de Chardin applied his whole life, his tremendous intellect, and his great spiritual faith to building a philosophy that would reconcile religion with the scientific theory of evolution. In this timeless book, which contains the quintessence of his thought, Teilhard argues that just as living organisms sprung from inorganic matter and evolved into ever more complex thinking beings, humans are evolving toward an "omega point"—defined by Teilhard as a convergence with the Divine.

Pierre Teilhard de Chardin (1881-1955) was a priest, paleontologist and geologist whose highly original publication, LE PHENOMENE HUMAIN, attracted world-wide attention when it was first published. He wrote of the beginnings of our planet, the emergence of life, the birth of thought and the development of socialization in order to give humankind the inner vision necessary to thrive in an expanding universe. The original translation into English contained many fundamental mistakes clouding our understanding of Teilhard de Chardin's vision. Sarah Appleton-Weber has based her new translation, which is endorsed by the Teilhard de Chardin Foundation (Paris), on her careful comparison of the four versions of the French text. Poet and scholar Appleton-Weber, who has closely studied Teilhard's essays, letters, and other writing, gives a consistent and coherent voice to this translation of Teilhard's book.

Establishes the connection between the evolutionary scientific ideas of The Human Phenomenon and the Christian spirituality and theology of The Divine Milieu.

The Future of Man is a magnificent introduction to the thoughts and writings of Pierre Teilhard de Chardin, one of the few figures in the history of the Catholic Church to achieve renown as both a scientist and a theologian. Trained as a paleontologist and ordained as a Jesuit priest, Teilhard de Chardin devoted himself to establishing the intimate, interdependent connection between science—particularly the theory of evolution—and the basic tenets of the Christian faith. At the center of his philosophy was the belief that the human species is evolving spiritually, progressing from a simple faith to higher and higher forms of consciousness, including a consciousness of God, and culminating in the ultimate understanding of humankind's place and purpose in the universe. The Church, which would not condone his

philosophical writings, refused to allow their publication during his lifetime. Written over a period of thirty years and presented here in chronological order, the essays cover the wide-ranging interests and inquiries that engaged Teilhard de Chardin throughout his life: intellectual and social evolution; the coming of ultra-humanity; the integral place of faith in God in the advancement of science; and the impact of scientific discoveries on traditional religious dogma. Less formal than *The Phenomenon of Man* and *The Divine Milieu*, Teilhard de Chardin's most renowned works, *The Future of Man* offers a complete, fully accessible look at the genesis of ideas that continue to reverberate in both the scientific and the religious communities.

The Divine Milieu is a meditation book for intellectuals and is addressed primarily to those who waver rather than to Christians who are firmly established in their beliefs. However, as the author writes in the preface, there is not much in this book on moral evil and sin. Teilhard de Chardin assumes that he is dealing here with souls who have already turned away from such errors. The subject to be treated in these pages is actual, supernaturalized human beings, seen in the restricted realm of conscious psychology.

One of the most prominent thinkers of his generation, Hans Jonas wrote on topics as diverse as the philosophy of biology, ethics and cosmology. This work sets forth a systematic philosophy of biological facts, laid out in support of his claim that mind is prefigured throughout organic existence.

Teilhard's book *The Human Phenomenon* (*The Phenomenon of Man*) developed many of the fundamental concepts of Teilhard's evolutionary thinking which were the foundational ideas for his integration of evolutionary science with Christian theology and spirituality. In this book, Savary skilfully examines the connection of Teilhard's evolutionary scientific ideas and his spirituality and theology. Consequently, *Teilhard de Chardin--The Human Phenomenon Explained* presents Teilhard's scientific ideas accessibly while also explaining the text, showing how the ideas presented in each section may be directly applied to theological thinking, spiritual practices, and moral behavior.

This book represents Huxley's thinking over more than 40 years about religion and about human nature and destiny.
