## The power of human energy

Human power is work or energy that is produced from the human body. It can also refer to the power (rate of work per time) of a human. Power comes primarily from muscles, but body heat is also used to do work like warming shelters, food, or other humans. World records of power performance by humans are of interest to work planners and work-process engineers.

---

## Human power - Wikipedia

The average human generates around 100 watts in an average day. Depending on the person's activity, weight, and metabolism, a person's power can be slightly higher or lower. A typical American consumes about 2500 kilocalories of energy in a day. Assuming no weight gain or loss, this also means that 2500 kilocalories are used by the body in a day.

---

## Power of a Human - The Physics Factbook

Human beings on this planet are the creators of a large amount of energy. Our bodies are constantly radiating outward an energy field of an aura that extends out many feet from the body; this energy exchanges information with everything it comes in contact with. Psychic people are sensitive to this energy and can read the information telepathically from the energy field attached to objects, people and animals.
