Fibroids are non-cancerous growths that develop in or around the womb (uterus). The growths are made up of muscle and fibrous tissue, and vary in size. They're sometimes known as uterine myomas or leiomyomas. Many women are unaware they have fibroids because they do not have any symptoms. Women who do have symptoms (around 1 in 3) may experience:

Uterine fibroids are noncancerous growths of the uterus that often appear during childbearing years. Also called leiomyomas (lie-o-my-0-muhs) or myomas, uterine fibroids aren't associated with an increased risk of uterine cancer and almost never develop into cancer. Fibroids range in size from seedlings, undetectable by the human eye, to bulky masses that can distort and enlarge the

Uterine myomas (fibroids, fibromyomas, or leiomyomas) are benign mesenchymal tumors, which arise from smooth-muscle cells and extracellular matrix of the uterus and represent the most common tumor of the female genital tract. The overall incidence is between 4% and 11%; this percentage rises to 35% during the reproductive age and to 40% in women over 50 years old.
